

Fungicide cleaner

Technical Specifications

Date of issue: 02/06/2025

Version Number: 7th

Fungicidal cleaner and disinfectant for mold and fungi

Odourless, non-toxic fungicide, suitable for cleaning, protecting and sterilizing every interior and exterior surface from algae, bacteria, fungus and microorganisms. It is ideal for preventing fungus growth on painted surfaces in interior settings with significant moisture and vapour condensation, as well as neutralizing fungus on surfaces with mould growth. FUNGICIDE CLEANER is very effective, even for cleaning moss and lichen that develops from algae on exterior surfaces, such as walls, stones, bricks and pools. FUNGICIDE CLEANER can be also applied for eliminating microorganisms and bacteria, as well as keeping the necessary hygiene standards in kitchens, bathrooms, restaurants, hotels, food industries, etc.

Product information

- Surfaces with mould or sensitive to mould growth.
- Coastal constructions and country homes with significant moisture problems.
- Kitchens, restaurants, hotels and food industries for cleaning and eliminating microorganisms and bacteria.

Application

Apply with roller, paintbrush or sponge

Drying - Recoating

For neutralizing fungus on surfaces with mould growth, allow 24 hours to activate, remove completely any mould traces, wash down with clean water, let the surface dry completely and recoat after 1-2 hours. For protecting or sterilizing purposes allow 1-2 hours to dry. Temperature must be above 8°C during application and drying time.

Thinning

For cleaning surfaces from mould, bacteria and algae, use undiluted. For sterilizing purposes, dilute 1 part of Fungicide cleaner with 10 parts clean water.

Coverage

16-20 m² per litre approximately, depending on the surface porosity.

Physical / Technical Characteristics

Viscosity	11 sec DIN 4
Density	1 ±0,002

Color shades

Transparent.

Clean up

Clean up tools and equipment immediately after use. Do not empty waste water into drains or watercourses.

Packaging

Transparent	1 lt.
